

BATTLEGROUNDTM

ALWAYS ON. ALWAYS READY.

OVERVIEW

BattlegroundsTM is k>fivefour's high fidelity cyber range tailor made for mission readiness. Isolated environments, realistic enterprise networks, and scenarios at every tier, available around the clock. Skills degrade between events and adversary tradecraft keeps evolving. Battlegrounds closes that gap with a live, browser-based range available 24/7, with no special software required. Every user gets an isolated environment built on full Active Directory forests and realistic enterprise infrastructure. Training becomes continuous instead of a one-week event.

BUILT LIKE THE REAL THING:

BROWSER-BASED ACCESS

Isolated, per-user environments you reach from any browser, with no special software to install. Train from anywhere, at any hour, without standing up local infrastructure.

REALISTIC NETWORKS

Full Active Directory forests and realistic enterprise infrastructure, so what you practice on behaves like what you defend or attack in production. Operators can upload their own tools, just like real ops.

CONTINUOUS ACCESS

Available 24/7 so training continues long after a course ends. Skills stay sharp between events instead of decaying until the next scheduled exercise.

TEAM MODE

Multiple users can share an environment for collaborative exercises, mirroring how real teams work a problem together rather than training in isolation.

TRAINING ANALYTICS

Ability to track student activity and progression and manage team training status through our custom learning management system.

REALISTIC ENVIRONMENTS, CONTINUOUS ACCESS, AND SCENARIOS THAT SCALE FROM YOUR FIRST CHALLENGE TO THE HARDEST IN THE LIBRARY.

Battlegrounds is where operators access training built by the wider k>fivefour platform.
