

TECTIX™

PROVEN SUCCESS:
93% reduction in ATO
package review time
(2 weeks to 1 day) across
580+ systems
via Army Materiel Command

OVERVIEW

TECTIX™ transforms RMF compliance from a resource-intensive burden into a strategic advantage. By integrating directly with eMASS via API, TECTIX delivers enterprise-wide risk visibility, continuous monitoring, and automated compliance, eliminating duplicate workflows and enabling real-time decision-making. Aligned with CSRMC's emphasis on automation and the January 2026 DoW AI Strategy mandate, TECTIX is built for where federal cybersecurity is going, not where it's been.

STRATEGIC VALUE FOR LEADERSHIP

- **Enterprise Risk Visibility:** Real-time dashboards provide leadership with immediate insight into compliance posture across all systems. Identify bottlenecks, track authorization trends, and make data-driven decisions, not spreadsheet guesses. Native eMASS integration ensures authoritative data without manual compilation.
- **Continuous Monitoring & CSRMC Alignment:** Move beyond point-in-time compliance snapshots. TECTIX enables always-current risk awareness through constant eMASS sync, directly supporting CSRMC's core tenets of automation, continuous monitoring, and dynamic risk management.
- **Workforce Optimization:** Free cyber analysts from repetitive documentation tasks. With 175+ automated test points, TECTIX handles compliance paperwork so your team can focus on actual security work, supporting more systems without proportional staffing increases.
- **DoW AI Strategy Alignment:** The January 2026 SecDef mandate directs DoW to become "AI-first" across enterprise workflows. TECTIX's planned AI/ML capabilities include intelligent checklist analysis, automated control assessment, and AI-generated artifacts which directly support this strategic direction.
- **Native eMASS Integration:** TECTIX augments eMASS, and it doesn't replace it. eMASS API connectivity ensures all authoritative data remains in your system of record while TECTIX provides the advanced analytics, automation, and dashboards that eMASS alone cannot deliver.
